We Identify and S.T.O.P. Your Noise Problems

THE VOICE CURVE™

The newest Acoustic Geometry™ innovation is the Voice Curve, a cylindrical diffusor specifically designed to enhance the sound of voices in conference and meeting rooms, voice-over booths, home theaters, and recording studios. It features an asymmetric (tapered) vertical profile for diffusing critical voice articulation frequencies, 'green' recycled cotton sound absorption backfill, and two-point mounting brackets for easy wall placement.

The Voice Curve offers:

- Better speech recognition in meetings
- Better articulation and "live-ness" for speaking and singing
- Better dialog dispersion in home theaters

Dimensions: 48" h x 9.25" w (top) x 4.5" d (top).

Many fabric choices available. Shown in: gray, blue, black, and tan.

Mounting hardware included.

All resource and information files can be found at our Voice Curve Resources page.
